

FULL-HIGH CAP MIDDLE BLOCK

FULL-HIGH CAP END BLOCK

(Free Standing with texture on both sides)

TYPICAL APPLICATION

NOTE: When a retaining wall is constructed that is supporting a road or sidewalk and the grade of the road or sidewalk is not level, it will be helpful to use a Full-High Cap Block at the end of each course of retaining wall block. This will provide texture on the back side of the wall (facing the road or sidewalk) until the grade is sufficient to cover the untextured back of a typical retaining wall block.

Design is for internal stability of the Shea wall structure only. External stability, including but not limited to foundation and slope stability is the responsibility of the Owner. The design is based on the assumption that the materials within the retained mass, methods of construction, and quality of materials conform to Shea's specification for this project.

Disclaimer: This drawing was prepared by Shea Wall Systems, Inc. and to the best of our knowledge, accurately represents the product use in the application that is illustrated. This drawing is for conceptual, instructional, and estimating purposes only. Anyone making use of this drawing does so at their own risk and assumes all liability for such use. Final design for construction purposes must be done by a registered professional engineer who is familiar with the product and who has taken into account the specific site conditions.
